

Characterization and Material testing

The METMASS society of Metallurgical and Materials Engineering department had come up with an innovative and interesting 5-day workshop that continued from 28th January to 1st February. Not only the students from the Metallurgical and Materials Engineering department took active participation in this theoretically and practically informative workshop but many students from all the other branches and departments looked keen to get benefited from it. The first two days went with teaching by the organisers who were the second and third year seniors and making the students understand the topic of Characterization and Material testing. Presentation slides were used to make the topic interesting and more informative. On the third day, the participants were taken to labs to have practical and hands-on experience over the topic making it the most enjoyable part of the workshop. The fourth day was carried by a quiz round testing the knowledge and understanding of the topics taught in the previous days. Appreciable attendance was maintained during all the four days of workshop. The top three winners of the quiz were awarded with prizes and the top 11 got the golden chance to visit the most amazing MRC building of MNIT. Although, participation certificates were awarded to all the candidates who attended the 4-day workshop and the organisers who conducted the workshop. This was a big event for METMASS society in the beginning days and was extremely well executed under the guidance of METMASS society President Vikas Tiwari and faculty coordinator Dr Swati Sharma. The workshop ended on a great note with the prize distribution ceremony by the Head of Department Dr V K Sharma and the MRC visit.
